

The “Big Easy” comes to guided wave radar.

**Easy to install.
Easy to set up.
Easy to use.
All at an affordable price.**

TDR technology doesn't get any simpler than our new Impulse level sensor. Just input tank height, material type and blocking height, then set your lower/upper range values.

On the tank or on the bench, set-up's a snap using its onboard keypad display or a laptop using HARTWin software. Plus, Impulse level technology's low price brings Drexelbrook quality and reliability within easy reach. And its rugged housing design makes it an easy choice for tougher environments. All this, backed by an industry-leading 2-year warranty plus 50 years of Drexelbrook experience and performance.

Could your decision be any easier?
